# A Real Alternative to CIJ Printers

The very foundation of inc.jet's printing solutions is thermal inkjet technology (TIJ). inc.jet offers ready-to-run, high-resolution, variable data digital printing systems designed with high-performance, low maintenance and cost effectiveness in mind. Now inc.jet extends its reach printing effectively, efficiently and at a lower cost than before on non-porous substrates such as glass, metals and plastic.

## SOLID HARDWARE SOLUTIONS

The 1/2" .UNO all-in-one print head and screen give you a simple, yet incredibly powerful way to print up to 1/2" height of print with the minimum of effort. The system, comprising of a 7" screen and attached print head allows you to be up and running within minutes.

Using inc.jet's proven and highly reliable print solutions based on HP technology, the .UNO is the ideal product for serialization, barcodes and human readable printing.

## INK THAT PRINTS ON EVERYTHING

PrimeX was designed to take TIJ to next stage in printing on non-porous substrates. It is ideal for use with a wide variety of plastics, metals and even glass. The solvent based formula dries rapidly on many difficult substrates and has an excellent decap time.

PrimeX is available in the new SI cartridge, designed specifically for use with solvent inks.

## LIFETIME WARRANTY

A guarantee of reliability is what your business needs today. And a company to stand behind its products.

inc.jet does just that by offering a genuine Lifetime Warranty on its hardware. If there is ever a problem, we will replace it free of charges for the Lifetime of that product whether 1 year or 10 years from now.

# Lowest Cost of Ownership

## LOWEST OPERATING COSTS

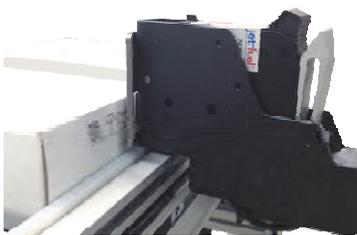

The initial cost of the equipment is often what is measured in the cost of any purchase; however it is the ongoing costs of consumables and maintenance that also have to be calculated over a longer period of time.

inc.jet's industrial print solutions win in both cases with up-front cost that are considerably cheaper than other print technologies, plus operational costs that are kept to a minimum by utilizing bulk ink systems.

## MAXIMUM UPTIME

Printing is often in the final stage of manufacturing. Anything that stops the process can have a significant impact downstream; a simple unplanned downtime can cost thousands. Reliability in your printing processes is therefore critical.

inc.jet gives you maximum uptime at all times by making the whole process simple, deskilled and dependable. There are no warmup or startup times at the start of a shift and should anything go wrong, a quick change of the print cartridge gives you a new printer in seconds.

## MAINTENANCE FREE

Planned and unplanned maintenance can amount to be a sizable sum of money in some print solutions – regular cleaning by technicians, filter changes, core updates. All this takes time and money.

With inc.jet Thermal Inkjet solutions, there is no maintenance. Every time you replace a print cartridge, you are replacing the entire printer. And that's a 5 second unskilled job.

## SAFER WORKING ENVIRONMENT

inc.jet uses a closed system with cartridges that jets ink on demand. There is no makeup, no venting solvents, no messy inks stains on the floor. Moreover there are significantly less VOCs present per print resulting in a working environment that is cleaner and safer.
